Program Highlights

Logicmojo offers Data structure, Algorithms & System Design Course For Cracking coding and System Design Interview for Top product-based companies. Each topic explains from very basic to an advanced level by using multiple examples. More focus is on Tricks, Techniques, and implementation than theory.

We have assignments with every lecture on every topic. After understanding lectures give it a shot to assignments which is based on similar concepts of lectures. Even if you can't able to crack assignments by yourself, we have all assignments detail discussion with code explanation. In this course, we teach all techniques of solving algorithms with the help of (Lectures + Assignments) combo.

Life time Access of Course

- 250+ Online Lectures
- Subscribers will get all Updates

Assignments & Assignments Discussion

- Assignments with every problems
- Assignments Discussions, Techniques & Hints

Analyse code for clear understanding

- Analyse every code with diagrams, blocks and pointers
- Step by step execution of code in Memory

Support from Experts

- Every Lectures Doubt clearance
- Code Editor for practice in Java/Python /C++
- Lectures from very basic to Advances

Weekly Coding Competition

- Live Coding Interview Experience Every week for subscribers
- Referral Supports for performers
- Compare Progress

Mock Interview Session

- Free Mock Interview sessions for Performers in coding test
- Tips & tricks to tackle interview process

Job Referral Program

- All Performers in coding test are eligible for Referral Program
- We also help in writing professional resume

Placement And Success Stories

Aravindo Swain

Working at Microsoft

I would say the best part is the explanation by the instructor, concise and clear.

Great quality online content and video lectures. it covers all algorithms and system design problems asked during interviews

Diwakar'Choudhary

Working at WalmartLabs

Excellent course for interview preparation, very straight to the point

In-depth coverage of every point. Nice way of explaining solutions to very complex problems in an easy way

Shagun Akarsh

Working at Amazon

Must recommend for the aspirants who are preparing for Amazon, Google, Microsoft, and Top Product Based Company interview

Thoroughly touches every topic of coding and designing aspects also lectures and assignments are enough for preparation. Better quality than any other courses on the Internet

Priya Singh

Working at Cisco

The course curriculum is of the best quality along with good coding problems. Just follow the preparation sequence mentioned by Instructor and 2.5 month is enough to become a master in coding

It's like a quick interview preparation guide. Rather than solving un-important thousands of coding problems, just finish logicmojo and appear for any organization interview..

Rajnish Kumar

Working at Flipkart

Great course! Helped me open some new doors in understanding how algorithms work and implementing solutions for the different exercises

The set of coding questions are quite good, most of them being from relevant industries interviews. Highly Recommended Course

Maruti Naidu

Working at NetApp

This is the best program one can take to begin and master competitive programming. The best part is assignments given for practice and assignments are also discussed.

My journey is there from an average programmer to a champ in coding. Along with my hard work, I want to give credit to Logicmojo also for wonderful lectures.

Syllabus | 6 Levels

Data Structure & Algorithms

Level 1 :

Topics :

- a) Arrays – Complexity, Searching, Sorting, Algorithm of Array
- b) Linked-List, Doubly Linked-List
- c) Binary Tree, Binary Binary Search Tree, N-ary Tree

Level 2 :

Topics :

- a) Stack/Queue
- b) Hashing/Heap Sorting
- c) Backtracking/Recursion
- d) Greedy Algorithms

Level 3 :

Topics :

- a) Graph Theory
- b) Dynamic Programming

Design Interview Preparation

Level 4 :

Topics :

- a) System Design Problems Discussion
- b) Object Oriented Problems Discussion
- c) Design Pattern Object Oriented Principal

Distributed System, Microservices Architecture & Docker Deployment

Level 5 :

- a) Micro-service Architecture & Docker Cloud Deployment
- b) Distributed System & Scalable System

Multithreading & Behavior Interview Questions

Level 6 :

- a) Multithreading & Synchronization
- b) Behaviour Interview Question & Answers for Experienced

Program Details

Course Prerequisite

Should have basic knowledge of Java or Python or C++ Programming

Who Should Subscribe For this Course

- Working professionals preparing for interviews of Big-5(Google,Amazon,Microsoft,Facebook,Apple) and Top Product Based organization
- BTech / MCA /MS Students looking for data structures,Algorithms & System Design coaching
- Job seekers who are preparing for interview in Product MNC/e-commerce companies
- Anyone who has a deep desire to learn data structures, algorithms, and system design to improve programming/coding skills and designing skills

About Instructors

Our instructors are working professionals who graduated from premier institutes and work with premier companies Like

WalmartLabs

Profile : 

Fees and Duration

Accessibility: Lifetime Access Course

Program Fee : **5950/-**

Grab 20% Discount on the above price for this week
Discount code will come to your mobile after Sign-up

Sample Lecture Preview

Design Airline reservation System using Object Oriented language

Implement Snake Ladder Algorithm using BFS Approach

Design Generic Deck of Cards

Course Details

ARRAYS

Complexity, Sorting,
Searching, Matrix related Problems
Strings Algorithms
Arrays $O(1)$ operations, Searching duplicates

Linked-list

Iterative & recursive approaches
Doubly LinkedList, flattening linked list
Sorting and searching operations on LL

Binary Tree (BT)

Binary Search Tree, N-ary Tree
Print BT from Different View
Conversion of BT, Post-Order, InOrder, PreOrder Operations
Mirror Operations, Leaf Nodes Distances, Lowest Common Ancestors
Recursive and Iterative Operations
Note : Un-important topic in Tree is B* Tree, Red Black Tree, AVL tree, Segment Tree

Stack/Queue

Stack/Queue operations in $O(1)$ time, combining stack and Queue
Applying stack/queue in Binary tree-based
Matrix problem solved using stack
Note: Direct questions are not asked in this Topic. Always application based on stack/queue.

Hashing/Heap Operations

Hashing $O(1)$ Operation,
Priority Queue, MaxHeap/Min Heap,
Heapify Operation, Find Medians,
Merge Operation in $O(\log n)$ using Heap

Backtracking/Recursion & Greedy Algorithms

Applying recursion or backtracking techniques on different games
find permutations, recursive efficient approaches
Problem based on Greedy Algorithms
Note : Recursion is most important topic in DSA

Course Details

Graph Theory

Depth first search, Breadth first search
Topological Sorting, Package Dependency ,Phone Dictionary Algorithms
Trie Implementation and Applications based on it
Longest Prefix , Matrix Related Assignments
Note: Prefix Tree is not much important for Interview perspective

Dynamic Programming(DP)

How to identify DP problems
Single Strings Problems: Longest Palindrome Subsequences/String,
Word Break, LIS(Longest Increasing Subsequence),Subset problems
Two Strings Problems: Longest Common Subsequences/Strings, Edit Distance
Interleave Strings, Wild card match,
Fibonacci Series: Nth Stair, Keystroke Algorithm
Note: Once tricks is understood then DP is comparatively very easy to solve

System Design Interview Preparation

Scalable components Understanding, Sharding, NoSQL,
Distributed Cache, Load balancer, Message Queue Techniques
Detail High Level Design(HLD) and Low Level Design(LLD) for many billions users Live System

Scalable System Design, Distributed System & Microservice Arch

Micro-service Architecture in detail, Message Queue Active MQ, Kafka,
Service Discovery, Distributed Tracing & Monitoring
Fault Tolerance, Concurrency Issues, Distributed Transaction

Multithreading & Synchronization

Creation and Invocation of thread, synchronization of threads
deadlock detection and prevention, producer consumer
multi reader writer, print numbers using multiple threads

Cloud Docker Deployment & Behaviour Interview

Jenkins Integration, Understanding Cloud Infrastructure
Behaviour Interview Questions & Answers for Experienced

Mock Interview & Job Assistance

HOW IT WORKS

Step 01

Finish Topics of the course

This course is divided into multiple topics. Subscribers can finish topics one after another. The preparation sequence of the course and time to accomplish every topic is already shared in the course brochure

Step 02

Participate in Weekly Coding Test

We organized Online weekly coding test for all subscribers of Logicmojo. Every week we have coding competition on one specific topic of DSA. Every week subscribers learn and practice topics in coding competition. All top performers will be eligible for Mock Interview and Resume Guidelines by experts as well as they are intelligible for Job referral program for FREE.

Step 03

Mock Interview & Resume Guidelines

For all top performers in the online weekly coding test, we conduct FREE Mock Interviews from experts. It will give them the experience of Live interviews. Also, we help them with resume preparation tips and guide them on writing a professional resume to get a call from Top Big-5.

Step 04

Job Referral Program

All performance also illegible for our Job referral program through partnered consultancies and software companies for coding interviews.
